Project :

- 1) Build the rails project
- 2) open local host : <http://localhost:3000/> . Below page should be visible

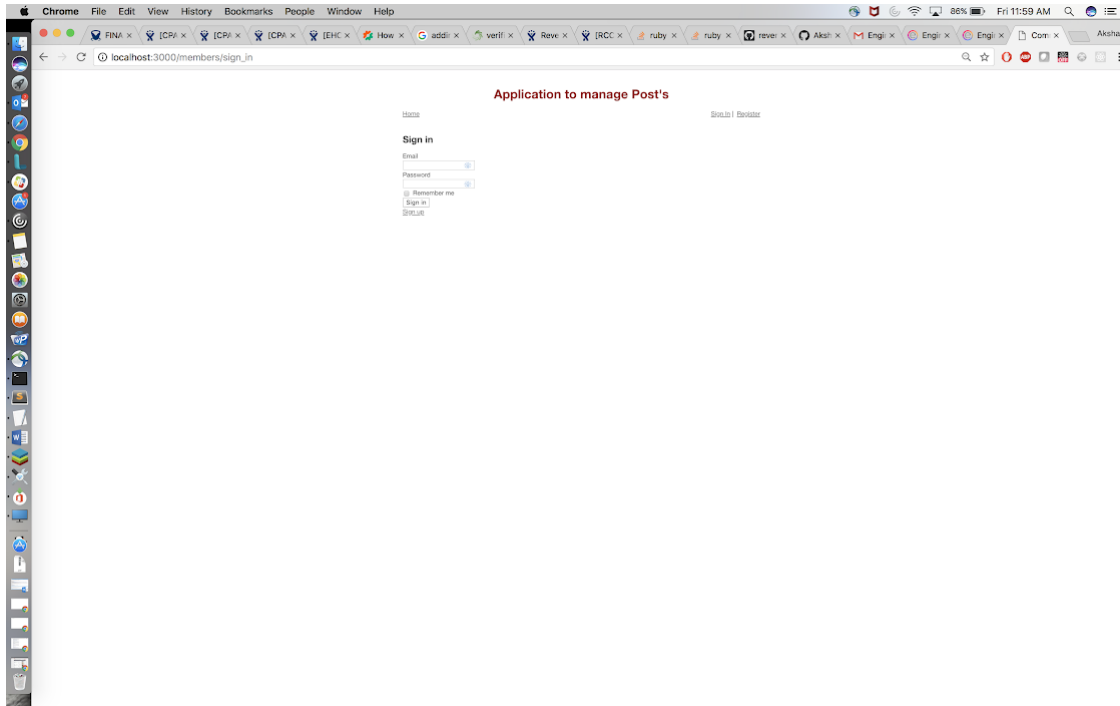

- 3) Click on register

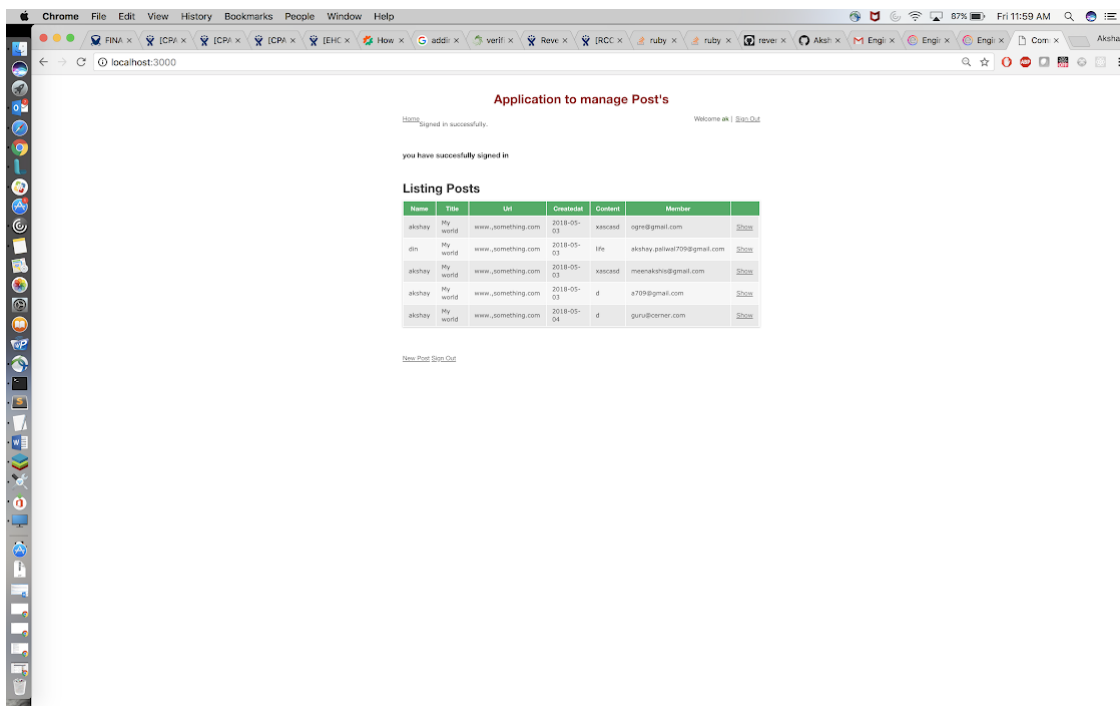

Enter the details and register once done you should be redirected to the home page again

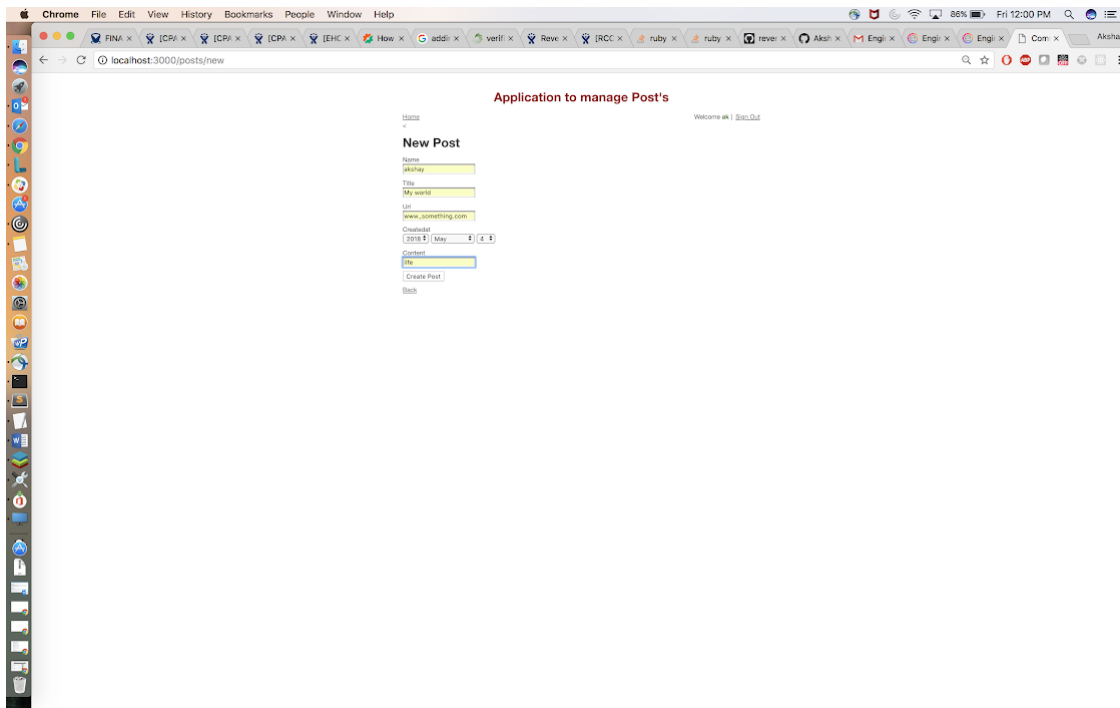

4) Sign in now

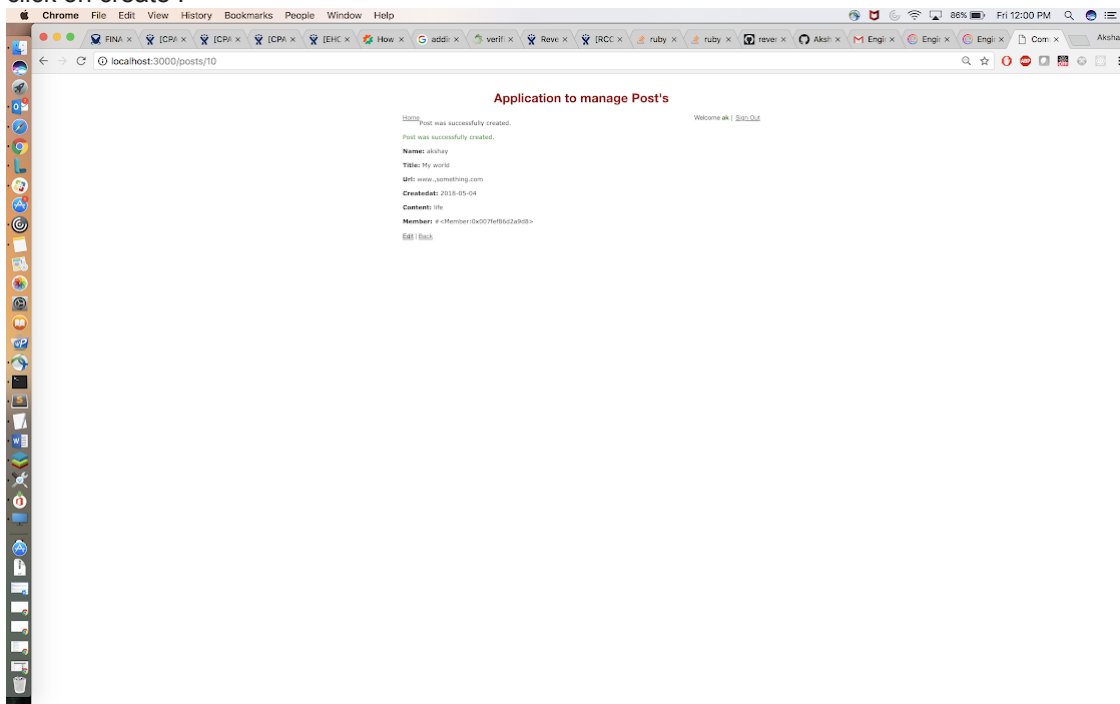

5) Should be redirected to the dashboard now . Here you can view all the posts but edit and delete only those which are created by the signed in user .

6) Create a new post now :

click on create :

7) now click on back . On the dashboard you will see that you can edit and delete only that post which you created and only view others
